

Lack of email data protection is the number one cause for breaches. This is because of the number of ways it can happen. No matter what the reason, protecting business email from inbound threats and outbound interception should be priority number one for your practice.

- 💡 Healthcare data is **10 times** more valuable than credit card data.
- 💡 In 2016, the number of email breaches jumped by **40%**.
- 💡 Hackers targeted **83%** of companies with email as their primary tool.
- 💡 There have been over **400 million** new pieces of Malware created in the last 2 years.
